This session is recorded

Outline

- What is the Deakin Simpsons Challenge 2021?
- About the task
- Timeline
- Eligibility
- Prizes and Sponsors
- Benefit
- How to participate?
- Questions

What is the Deakin Simpsons Challenge 2021?

- A computer vision competition for recognizing Simpsons characters
- The challenge is designed to:
  - Provide the opportunity to work as team members
  - Compete against each other
  - Enhance your learning experience by improving their AI modeling, problem-solving, and team-working skills
- **Designed with the same norms as any challenge organized in a top-tier AI conference**

What do you have to do?
The machine learning framework

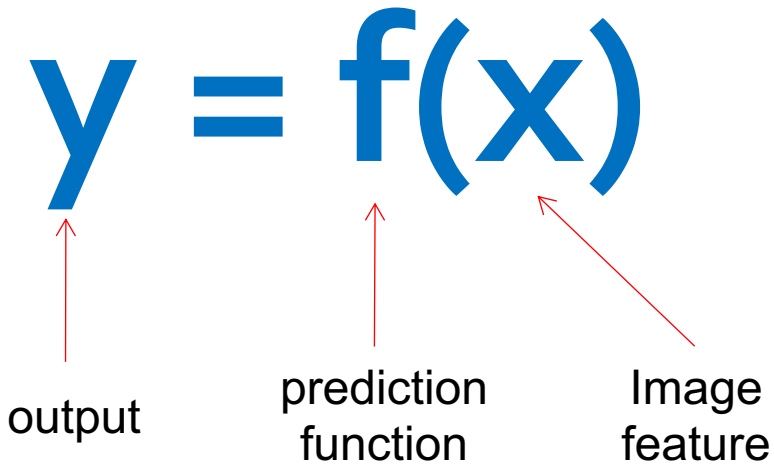
- Apply a prediction function to a feature representation of the image to get the desired output:

f() = “homer Simpsons”

f() = “principal skinner”

f() = “Moe Szyslak”

What do you have to do?
The machine learning framework



- **Training:** given a training set of labeled examples $\{(x_1,y_1), \ldots, (x_N,y_N)\}$, estimate the prediction function f by minimizing the prediction error on the training set
- **Testing:** apply **f** to a **never seen before** *test example* **x** and output the prediction **y = f(x)**

This is what CodaLab does!

What do you have to do?
Steps

Training

Training Labels

Image Features

Training

Learned model

This is what you have to Submit to CodaLab

Testing

Test Image

Image Features

Learned model

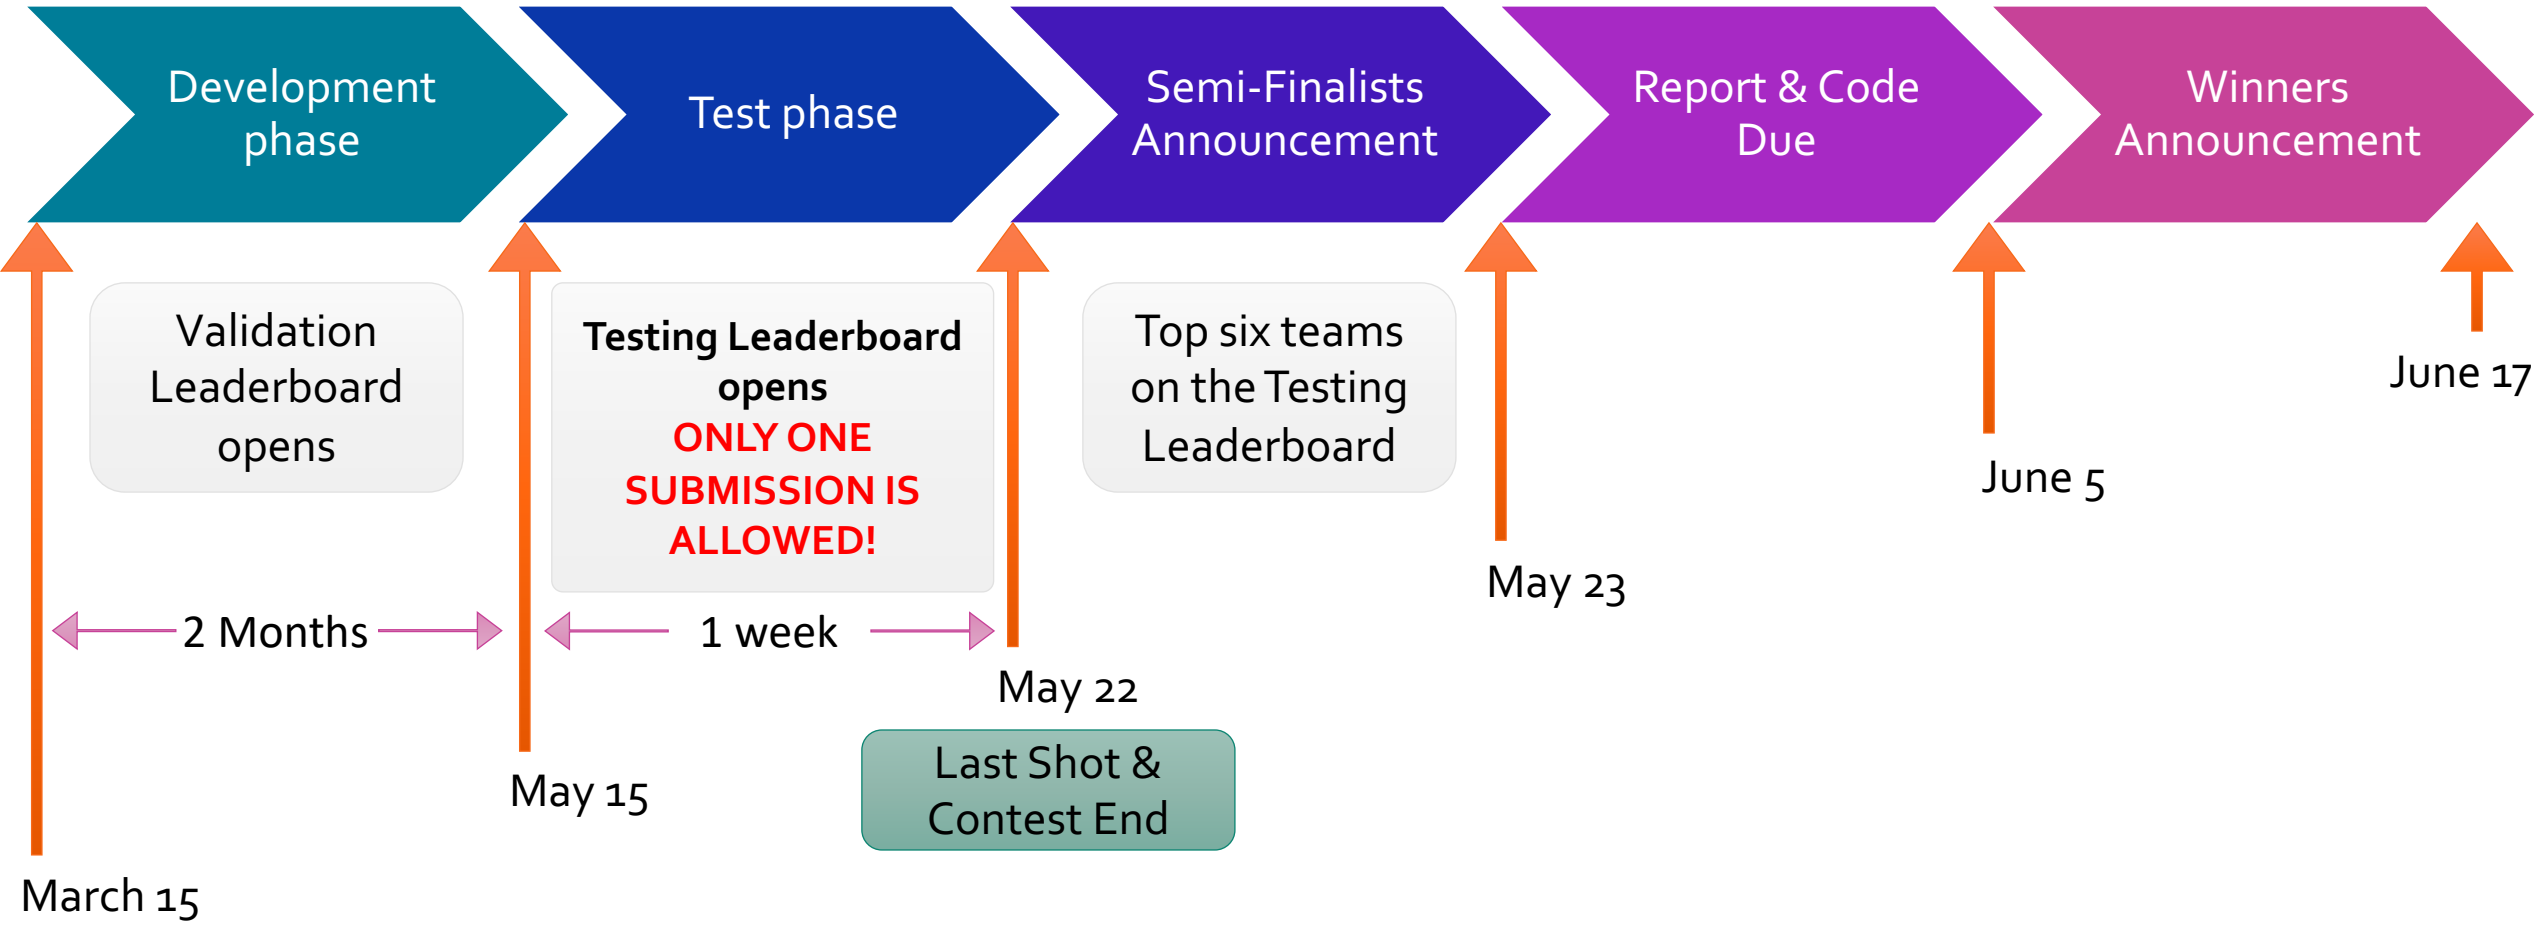
Prediction
" Moe Szyslak"

This is what CodaLab does!

The performance is evaluated using the Accuracy!

$$\text{Accuracy} = \frac{\#\text{correctly classified test images}}{\#\text{test images}}$$

Timeline



Test sets

- **Development phase**
  - 20 characters x 50 images = 1,000 test images
- **Test phase**
  - 20 characters x 50 images = 1,000 test images

You never have access to the images in the test sets!
Only CodaLab does!

- Images in the test sets are collected and labeled from TV show episodes
- Although images are different in each test test, they come from the same distribution

Eligibility

- **All participants need to be enrolled in a course within the School of IT**
- The semi-finalists are required to:
  - Achieve at least **80%** accuracy for the test phase
  - Submit a report, which describes the solution
  - Provide a link of the Github repo of the solution
  - The submitted codes and reports may be inspected to check the validity of the solution!

Prizes and Sponsors

Funded by
Community Bank
Deakin University
Bendigo Bank

DEAKIN UNIVERSITY

Deakin University
School of Information Technology

Award for

1st Prize Winners of the Deakin
Simpsons AI Challenge 2021

Presented to

John Doe, Dale Nixon, and Karen Eliot

in recognition for their excellent achievement

XX June 2021

Funded by Community Bank at Deakin University

Dr. Mohamed Reda Bouadjenek
Lecturer, School of Information Technology

Professor John Yearwood
Head, School of Information Technology

deakin.edu.au

Why should you participate?

- **The school official award that will be given to you provides an invaluable recognition for your achievement**
  - An award is critical when you apply for a job or a PhD scholarship!
- The perfect place to learn best practices in AI, accrue feedback on your work, and augment your skills
- A channel for problem-solving and brainstorming
- An opportunity to push boundaries and encourage creativity
- The experience you get is invaluable in preparing you to understand what goes into finding feasible solutions for big data

How to participate?

- Register to the CodaLab platform, then register to the competition on CodaLab
- **You can participate individually or in a team**
  - There cannot be more than 3 students in a team
  - To find team members or join a team, you can post a message on the discussion forum
  - Once you have built your team, the team leader needs to contact me and provides:
    - Names, CodaLab usernames, the Deakin course in which they are enrolled, and the name of the team

All you need is a Google account to use Google Colab!
